1. Press and hold the desired programmable key until a popup appears.
2. Select "Edit selected dialing" and press **OK**.
3. Select "Number" and press **OK**.
4. Enter the desired station number.
5. Select "Label".
6. Enter the desired key label.
7. Select "Options" and press **OK**.

Further helpful Features

Your OpenStage provides much more helpful features. See below a small selection with short descriptions. Detailed information please find in the respective operating instructions.

Multi-line

The programmable sensor keys on multi-line phones function as trunk keys. Each key programmed with the "Line" function corresponds to a line. This means up to 6 line keys can be configured on the OpenStage 40/40 G.

Lines can be used as a Private, Shared, or Direct call line.

Mobility (HFA only)

You can move your phone user interface with most of its functions and properties (phone number, key assignment, authorization, phonebook) to another phone.

The "Home User" is deactivated and you may use this phone as "Mobile User" (Mobile HFA) until you log off. Phone connections are transferred network-wide.

Retrieving Voicemail Messages

Depending on your communication platform and its configuration, you can use this application to access received callbacks and messages from OpenScape Xpressions.

If your system is appropriately configured, you can call the voice mailbox directly and immediately play back the stored messages.
