Configuration Data

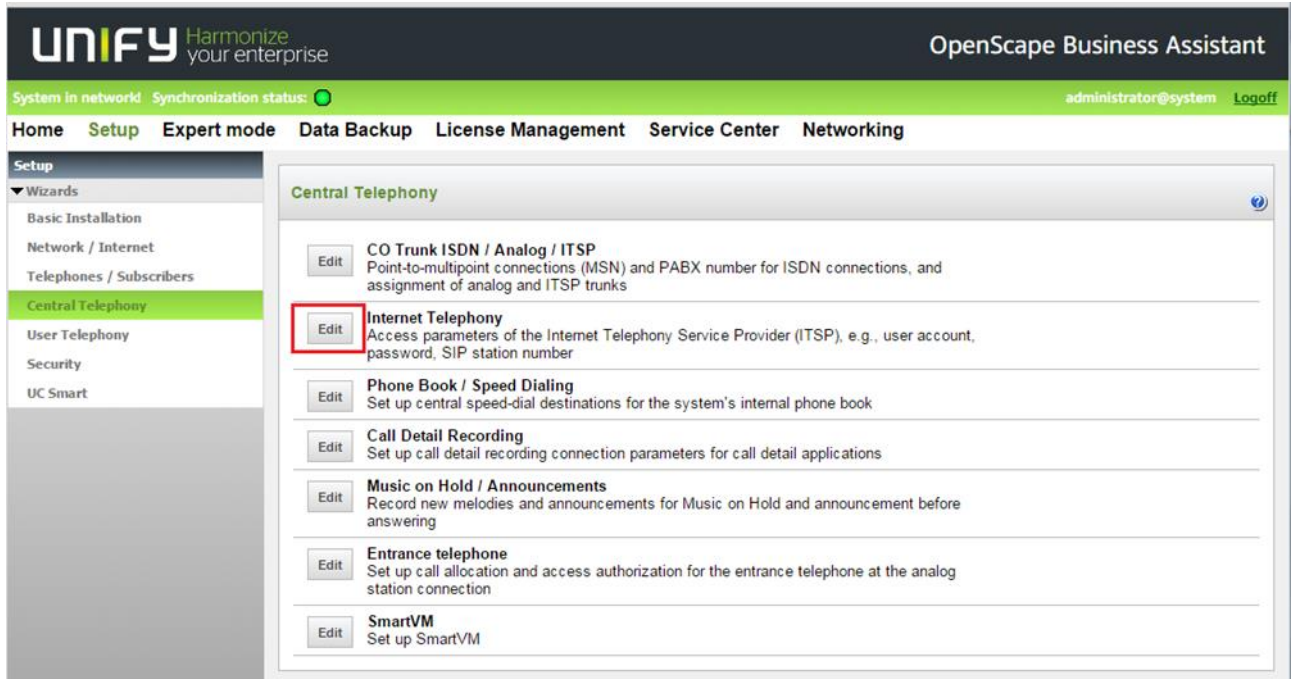

Information from ITSP SCALDIS ict & telecom

| Name | Example |
|---------------------------|---------------------------|
| Call Number: | (077) 3020190.....3020199 |
| Gebruikersnaam: | 104675001 |
| Wachtwoord: | e.g. 58#\$I19* |
| Number of voice-channels: | 2 |

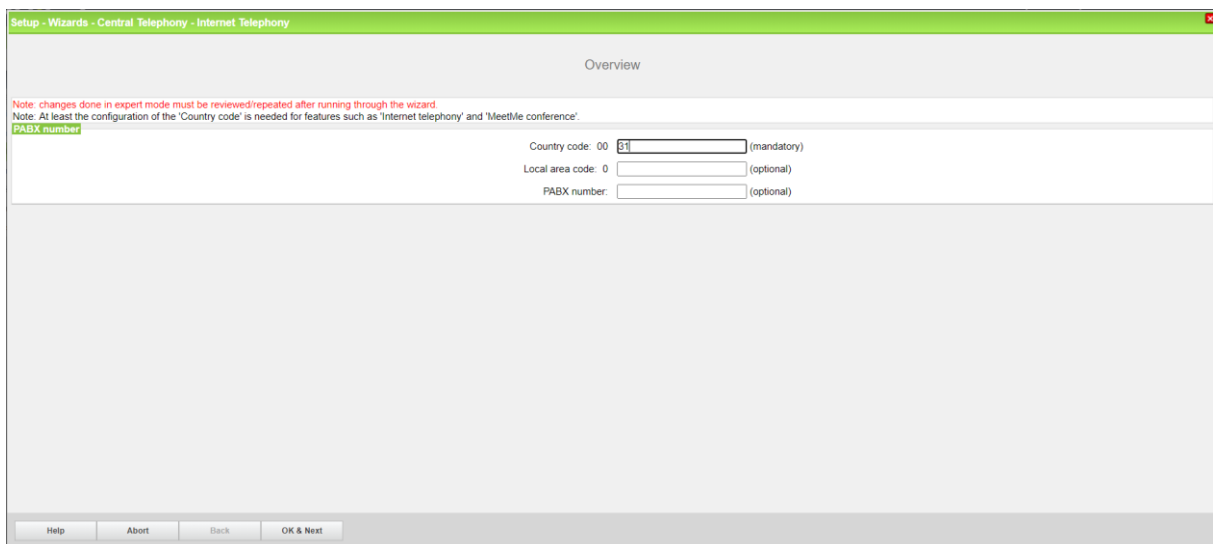

Configuration Wizard

Internet Telephony

Go to „Central Telephony – Internet Telephony“

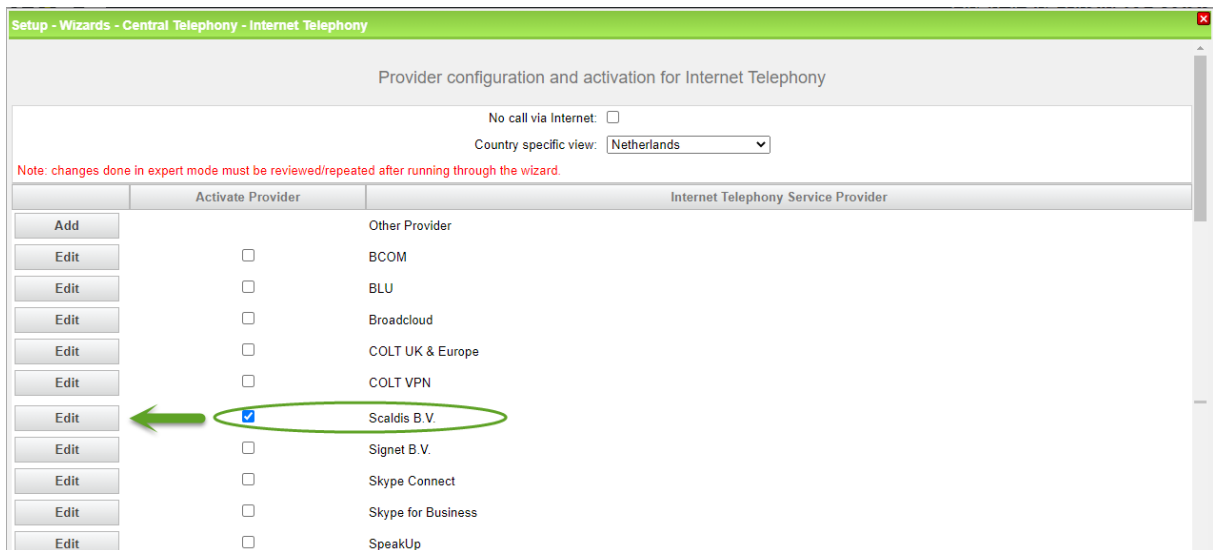

The overview page appears for entering the location data. The most flexible type of configuration is to enter the Country code only.

In this case, remaining digits are filled in DID field.
Click [OK & Next]

Provider configuration and activation for Internet Telephony -> No call via Internet -> uncheck

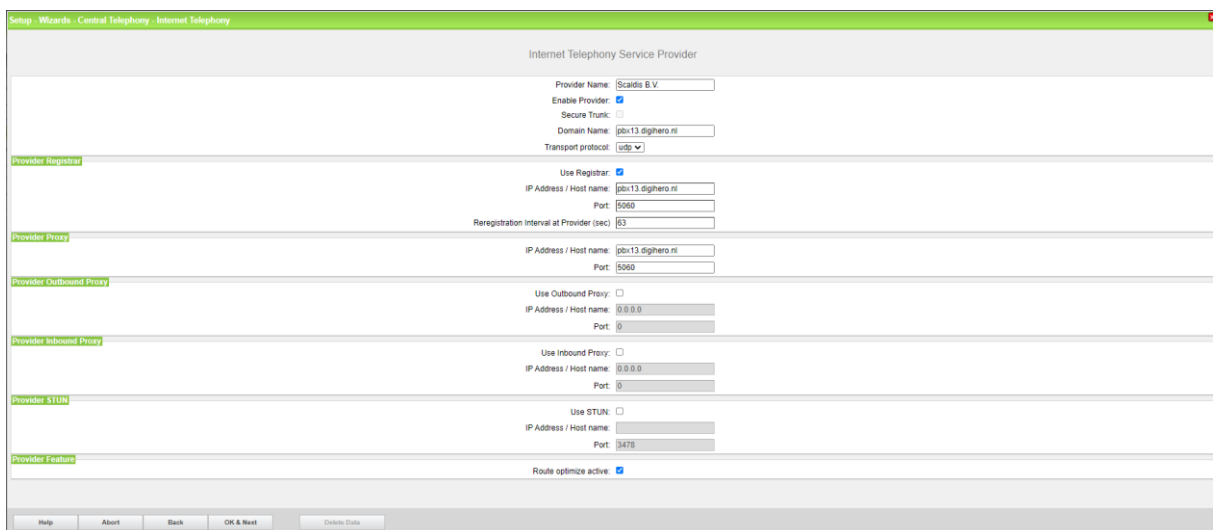

Use County specific view : Netherlands and select Scaldis B.V.

Activate Provider and click on [Edit].

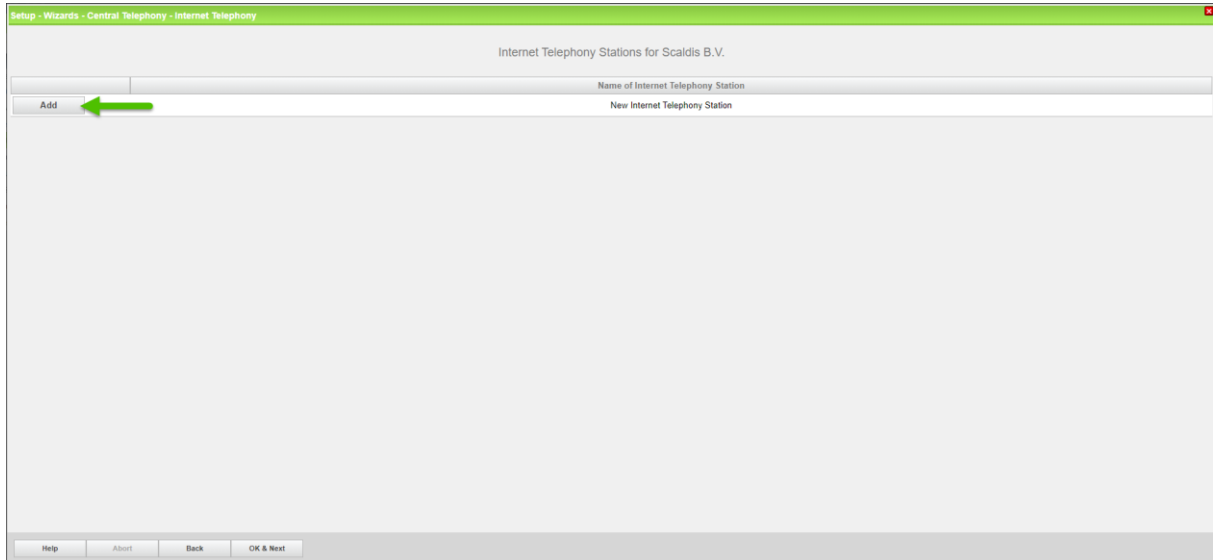

The following settings are shown. They should not be changed.

Only in case Call deflection must be used, the flag “Route optimize active” needs to be activated. In this case an external call forward will be done by the provider and the trunk channels in the system will remain free. If A-number presentation is preferred with Scaldis ICT & Telecom trunk parameter must be set.

Internet Telephony configuration

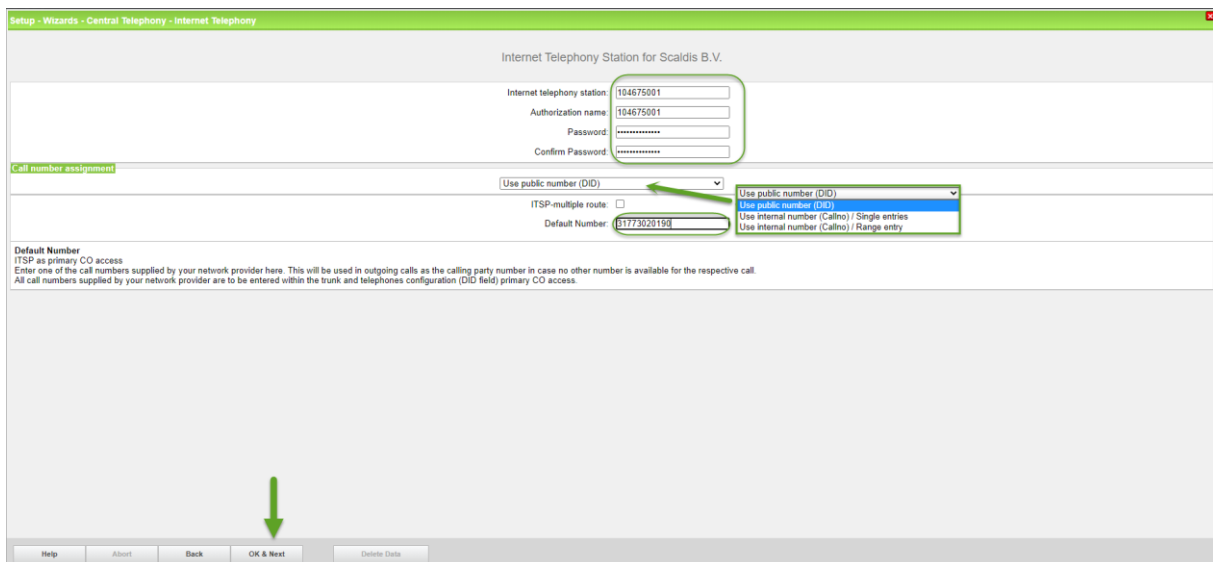

In this dialog the specific customer SIP User data will be configured.

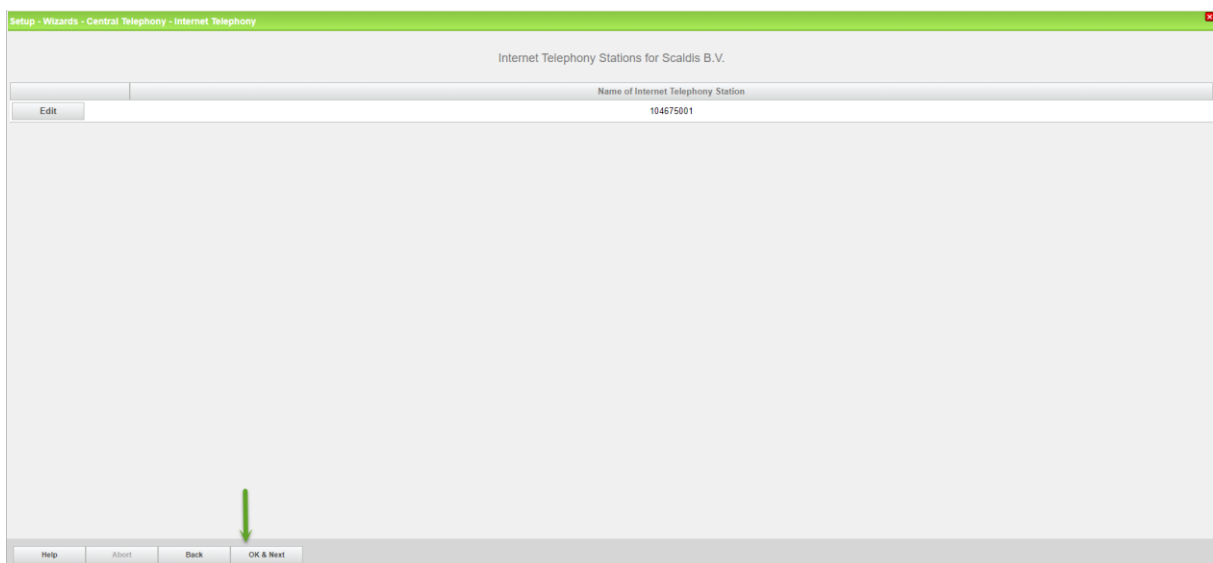

Click on [Add].

Data provided by ITSP SCALDIS ict & telecom is inserted here.

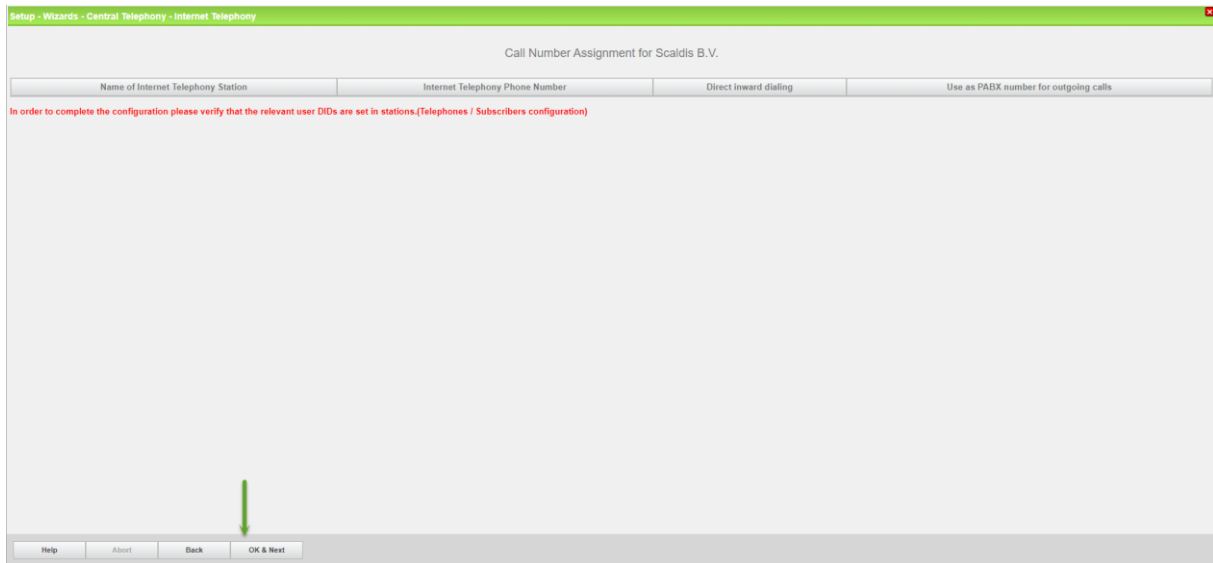

- Internet telephony station: "SIP-User" is inserted here.
- Authorization name: "SIP-User" is inserted here.
- Password: "Wachtwoord" provided by ITSP SCALDIS is inserted here.
- Call number assignment: select "Use public number (DID)". This is the easiest and preferred way to define the phone numbers in the system. Phone numbers are treated as a normal DID number in the system as if it was normal ISDN.
- ITSP multiple route: Must be used in case more then one account of the same provider (in this case SCALDIS) has to be configured on the same system. When this flag is activated you will be able to define extra accounts.
- Default number: Main number of the connection. The default number is used as Outgoing number when no DDI number is assigned to a station. (number must be in Implicitly international format)

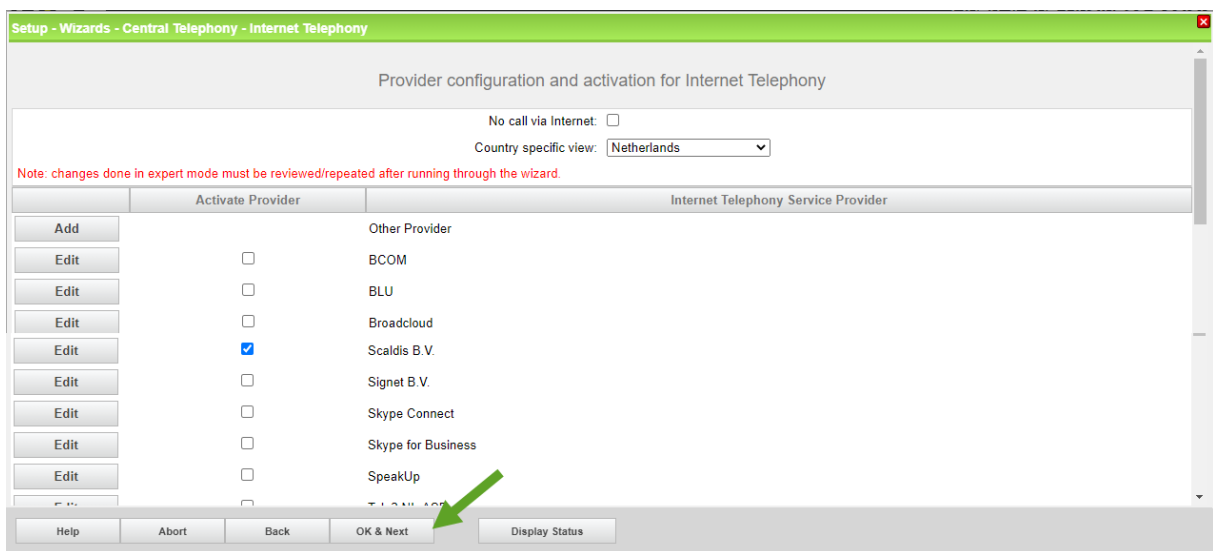

Click [OK & Next].

Click [OK & Next].

Click [OK & Next] (no input needed)

Click [OK & Next] (no input needed)

Define bandwidth (# Trunks)

In the next part the number of simultaneous calls via the SIP trunk will be defined. The calculation of the number of trunks is done by the wizard automatically depending on the bandwidth. For each 128K, one trunk is created. The number can also be defined manually.

Settings for Internet Telephony

Simultaneous Internet Calls
 Available Lines for ITSP: 199
 Please enter in field 'Upstream up to (Kbps)' the Upstream of your Internet connection communicated by your Provider. You have typed in
 Upstream up to (Kbps) = 2048
 In the 'Change Feature -> Internet Telephony' Assistant. This upstream allows you to conduct up to 16 Internet phone calls simultaneously. If the call quality deteriorates due to the network load, you will need to reduce this number of simultaneous calls.
 The number of simultaneous Internet Calls also depends on the licensing.

Upstream up to (Kbps):
 Number of Simultaneous Internet Calls: [Distribute Lines](#)

| Internet Telephony Service Provider | Configured Lines | Assigned Lines |
|-------------------------------------|------------------|--------------------------------|
| Scaldis B.V. | 2 | <input type="text" value="2"/> |

Help Abort Back **OK & Next**

Click [OK & Next]

Special phone numbers

In this dialog it is possible to route special phone numbers. When special phone numbers are not supported over the ITSP route it is possible to change this here.

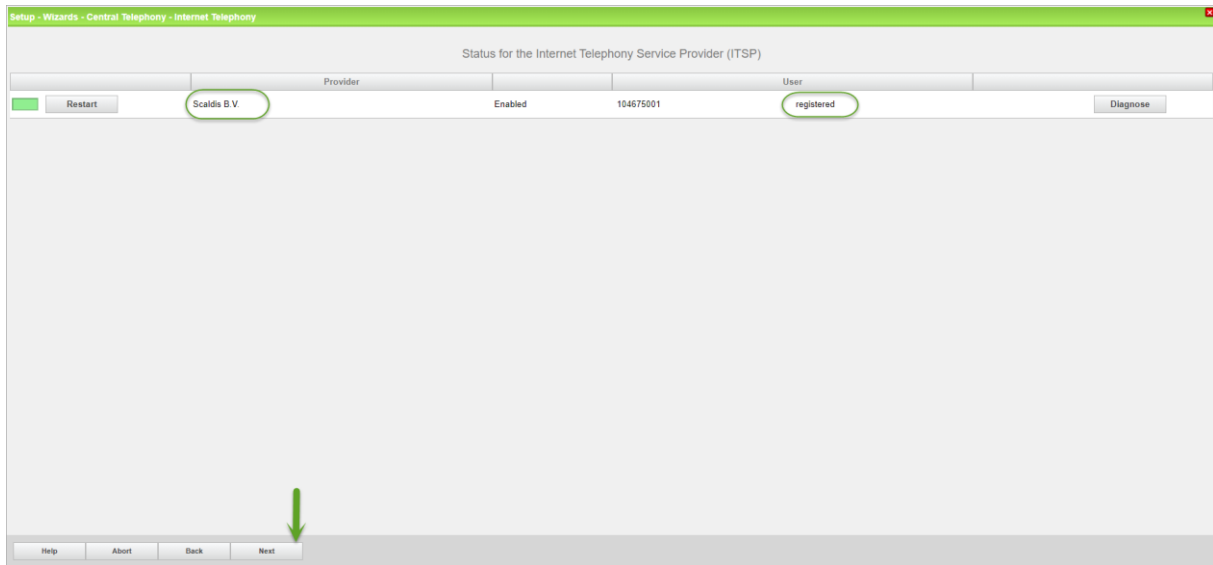

Special phone numbers

Note:
 Please make sure that all special call numbers are supported by the selected provider without fail.

| Special phone number | Dialed digits | Dial over Provider |
|----------------------|----------------------|--------------------|
| 1 | 0C112 | Scaldis B.V. ▼ |
| 2 | <input type="text"/> | Scaldis B.V. ▼ |
| 3 | <input type="text"/> | Scaldis B.V. ▼ |
| 4 | <input type="text"/> | Scaldis B.V. ▼ |
| 5 | <input type="text"/> | Scaldis B.V. ▼ |
| 6 | <input type="text"/> | Scaldis B.V. ▼ |
| 7 | <input type="text"/> | Scaldis B.V. ▼ |
| 8 | <input type="text"/> | Scaldis B.V. ▼ |
| 9 | <input type="text"/> | Scaldis B.V. ▼ |
| 10 | <input type="text"/> | Scaldis B.V. ▼ |
| 11 | <input type="text"/> | Scaldis B.V. ▼ |
| 12 | <input type="text"/> | Scaldis B.V. ▼ |
| 13 | <input type="text"/> | Scaldis B.V. ▼ |
| 14 | <input type="text"/> | Scaldis B.V. ▼ |
| 15 | <input type="text"/> | Scaldis B.V. ▼ |

Help Abort Back **OK & Next**

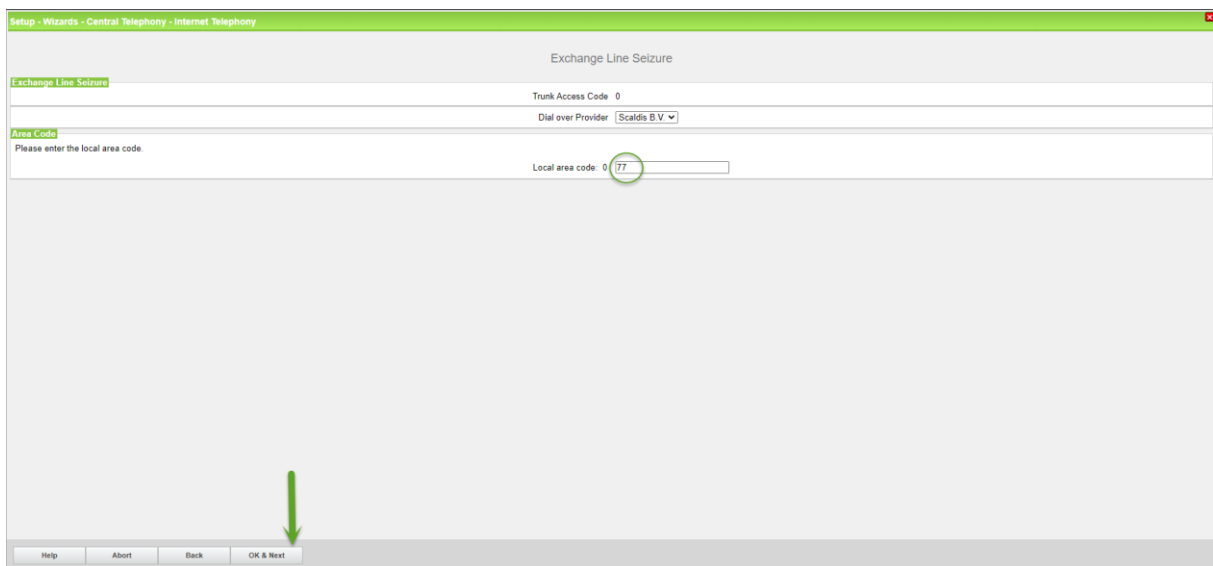

Click OK & Next and the ITSP status will be displayed

In case status LED is orange there is something wrong in the previous configuration.

After this status page the dialog with „Exchange Line Seizure“ is displayed.

Here you need to configure your own local area code. This is needed to make external calls without the area code. The LCR will be adapted accordingly.

Remarks:

Since G729 is not supported, it must be deactivated in Codec Parameters:

| Codec Parameters | | | |
|-----------------------|------------|-------------------------------|------------|
| Edit Codec Parameters | | | |
| Codec | Priority | Voice Activity Detection | Frame Size |
| G.711 A-law | Priority 1 | VAD: <input type="checkbox"/> | 20 msec |
| G.711 μ-law | Priority 2 | VAD: <input type="checkbox"/> | 20 msec |
| G.729A | not used | VAD: <input type="checkbox"/> | 20 msec |
| G.729AB | not used | VAD: <input type="checkbox"/> | 20 msec |

ITSP Scaldis does not support T38 faxing, so T38 must be deactivated in Codec Parameters. With T38 disabled G711 faxing is still possible.

| T.38 Fax |
|---|
| <p>T.38 Fax: <input type="checkbox"/> </p> <p>Use FillBitRemoval: <input checked="" type="checkbox"/></p> <p>Max. UDP Datagram Size for T.38 Fax (bytes): 1400</p> <p>Error Correction Used for T.38 Fax (UDP): 138UDPRedundancy</p> |
