To all Unify customers, partners, distributors and consultants   Munich, May 29th, 2019

Product Java Dependencies Overview

On January 25th, 2019, we distributed a customer information document with the purpose of outlining which Unify products are affected by Oracle's new subscription licensing model for the Oracle Java SE 8 public updates.

Since then some deeper investigations throughout the whole Unify portfolio have been carried out.

As a result, some more portfolio elements have been discovered which are also affected by Oracle's new subscription model.

There have also been various customer requests asking for a more comprehensive overview of the whole Unify portfolio, showing which product versions are affected and which are not.

To meet those extended demands we have created the Product Java Dependencies Overview for the Unify portfolio which is provided externally via our Experts Wiki.
You can download the document at https://wiki.unify.com/wiki/Product_Java_Dependencies_Overview.

Our R&D departments have worked on the further product planning for each affected product - to come up with a timeline/release planning outlining when there will no longer be the need to use Oracle Java.
Such a roadmap statement is already included for most of the products in the overview mentioned above, for others this will be delivered in addition, as an update in the Experts Wiki space.

Outlook: The Product Java Dependencies Overview will be updated every quarter – to outline the latest status and especially to confirm when a new version has been released without the need to use Java from Oracle.

Yours faithfully,

Luiz Domingos
SVP Unify Product House

Background: Oracle Java Subscription

Since January 2019, Oracle Java SE 8 public updates are no longer available for "business, commercial or production use" without a commercial license.

Oracle's new Java subscription price-list replaces previously available licenses and now provides a combined license and support subscription.

This enables commercial customers to gain access to continued support of Java beyond January 2019 as well as critical security patches.
