

optiPoint WL2

HowTo

Upgrade from HFA to SIP protocol

Version 1.0

1.1 How to upgrade to a SIP version e.g. 70-000-52 from a HFA version e.g. 50-001-052

The following procedure is needed to upgrade an optiPoint WL2 professional (HFA version) to an optiPoint WL2 professional S (SIP version).

The upgrade needs an updated factory data file system in the phone in order to work correctly. To get these upgrade to your phone there are a specialized intermediate software version. For safety reasons please save former settings over WBM backup. Therefore the software upgrade is done in two steps according to the following description.

1. Upgrade to the intermediate version *prep70_39.img*

Install first the intermediate version *prep70_39.img* via the common way either by WBM or by DLS. You can see the progress of this upgrade in the phone display. When the phone starts up with this version the factory data file system content is set to the default values of a standard SIP version and the default ringer tones and images are copied to the data files.

The following message will be displayed:

Temp. SW only!

Please Update!

and can be confirmed with "OK". It is not necessary to confirm it for the upgrade to the final version.

2. Finalize the upgrade to the final version with a standard SW file e.g. *swup_70-000-052*

Finalize the upgrade procedure with a standard update file e.g. *swup_70-000-052*

Because of security reasons are all settings and user data not changed during this upgrade.

The activation of the default phone settings have to be carried out manually via WBM or DLS.

If you use WBM please use:

System Settings - Reset User Data - User Settings Clear

or

Factory Reset - Restore the factory defaults

(Caution! All user data will be lost)

About Unify

Unify is one of the world's leading communications software and services firms, providing integrated communications solutions for approximately 75 percent of the Fortune Global 500. Our solutions unify multiple networks, devices and applications into one easy-to-use platform that allows teams to engage in rich and meaningful conversations. The result is a transformation of how the enterprise communicates and collaborates that amplifies collective effort, energizes the business, and enhances business performance. Unify has a strong heritage of product reliability, innovation, open standards and security.
