OpenStage XML Applications
RSSFeed User Interface
Issue 1.2 - 06/12/2007
Introduction

This document outlines the configurable aspects and user interface designs for the RSSFeed application on the OpenStage 60/80.

It also demonstrates the basic navigation of the application.

Clicking on a command (in most cases) will take you to the correct page.

RSSFeed is an application that allows the user to view RSS feeds from the internet. The feed can also be displayed as a ticker along the top of the application.
The following elements of RSSFeed are configurable:

- Time between updates
- Whether the ticker is enabled
- Proxy
  - Use Proxy – Whether you wish to use a proxy
  - Proxy Address – Address of the proxy server
  - Proxy Port – Port number of the proxy
- Whether the user can add new RSS Feeds
- Maximum number of items to display from a feed
- The title on the splash screen
- Whether to display images from the RSS Feed item
- A list of default feeds to display
